

# **Ostocal<sup>®</sup>**

Calcium Carbonate film coated tablet

# **Ostocal JR<sup>®</sup>**

Calcium Carbonate chewable tablet

## **DESCRIPTION**

**Ostocal<sup>®</sup>** is a preparation of calcium carbonate. Calcium carbonate is a salt after taking which provides calcium in the body. Calcium requirement varies with age. If calcium intake is inadequate, bone mineralisation may be impaired in children and bone loss accelerated in adults.

## **INDICATIONS**

Raised calcium requirement, e.g. during pregnancy and lactation, and in children and adolescents at times of rapid growth. Inadequate intake of calcium in the diet due to malnutrition. Prevention and treatment of osteoporosis. Disorders of osteogenesis and tooth formation (in addition to specific treatment), latent tetany and as a phosphate binder in chronic renal failure.

## **DOSAGE AND ADMINISTRATION**

**Ostocal<sup>®</sup>** tablet : One tablet daily or as directed by the physician. Higher doses should not be used unless recommended by the physician. Tablet must be swallowed.

**Ostocal JR<sup>®</sup>** tablet : Adults : 2 tablets daily; children : 1-2 tablets daily. Tablet must be chewed.

## **CONTRAINDICATIONS**

Hypersensitivity to the component of this preparation. Hypercalcaemia (e.g. hyperparathyroidism, vitamin D overdosage, decalcifying tumours such as plasmocytoma, severe renal failure, bone metastases), severe hypercalciuria (e.g. some forms of malignant disease) and renal calculi.

## PRECAUTIONS

In mild hypercalciuria [exceeding 300 mg (7.5 mmol)/24 hours] or renal failure, or where there is evidence of stone formation in the urinary tract, adequate checks must be kept on urinary calcium excretion; if necessary the dosage should be reduced or calcium therapy discontinued. High vitamin D intake should be avoided during calcium therapy, unless especially indicated.

Thiazide diuretics reduce urinary calcium excretion so the risk of hypercalcaemia should be considered.

Oral calcium administration may reduce the absorption of oral tetracycline or fluoride preparations. An interval of 3 hours should be observed if the two are to be given.

## DRUG INTERACTIONS

It increases the risk of hypercalcaemia with thiazides, it also reduces the absorption of tetracyclines and bisphosphonates.

## PHARMACEUTICAL PRECAUTIONS

Store in a dry place and protect from light. Keep out of reach of children.

## PACKAGING

**Ostocal®** film coated tablet : Box containing 10 strips of 10 tablets each.  
Each film coated tablet contains calcium carbonate USP 1250 mg equivalent to 500 mg elemental calcium.

**Ostocal JR®** chewable tablet : Container containing 30 tablets. Each chewable tablet contains calcium carbonate USP 625 mg equivalent to 250 mg elemental calcium.
