

Facid[®]

Cream/Ointment

DESCRIPTION

Facid[®] cream is the preparation of Fusidic Acid. Facid[®] ointment is the preparation of Sodium Fusidate. Fusidic Acid and its salts are narrow-spectrum antibiotics with powerful antibacterial activity against a number of Gram-positive organisms. Staphylococci, including the strains resistant to penicillin or other antibiotics and are particularly susceptible to Fusidic Acid and its salt. Besides, it has pronounced antibacterial activity against the majority of organisms responsible for skin infections. Fusidic Acid and its salt also possesses unique ability for penetration to the focus of infections, even when applied to the intact skin.

INDICATIONS

Facid[®] is indicated for the treatment of skin infections caused by *staphylococci*, *streptococci*, *propionibacterium aenes*, *corynebacterium minutissimum* and other fusidic acid-sensitive organisms. Most important indications are :

- Impetigo
- Boils
- Carbuncles
